RE: PORTALAB UNITS

Our school started using the minilab units in our Natural Science classrooms during 2010. These units make the teaching of Natural Science so much easier. I can really recommend these units to any school as it brings a laboratory into the classroom. The educator can use the minilab to illustrate an extremely wide range of both physical and chemical properties and phenomena. The units are easy to use and compact to store. Every Science educator should have access to one of these minilab units in his/her classroom.

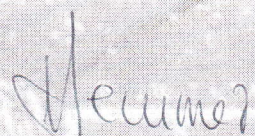

Our school has been achieving reasonable results in Natural Science. The use of the minilabs has enabled our learners to maintain this standard of work. Our results for the past three years are summarized below:

2010: Gr 8 – 51%	Gr 9 – 57%
2011: Gr 8 – 37%	Gr 9 – 52%
2012: Gr 8 – 55%	Gr 9 – 54%

The minilab units would be especially useful in a school where no laboratory facilities are available. Our school has a fairly well equipped Science laboratory, but the minilabs enable our educators to do demonstrations right in the classroom during the lessons. Time and effort is saved as the lab equipment does not have to be shared.

Kind regards

MRS M KUHN
